

Bug Report

Issabela Mora (“Kangkang”) — Web Developer Intern
Pasay Taft Tourist Dev Inc. (Urban Travellers Hotel) — February–May 2026

*Based on real testing work performed during my internship on the employee attendance and timekeeping system.
Documents a confirmed, fixed bug found during manual QA testing.*

Bug ID	TK-001
Title	Hiring date shifts forward by one day when edited
Module	HR — Employee List (201)
Severity	Medium
Priority	P2
Environment	HR view
Status	Reported — Confirmed — Fixed

Steps to Reproduce

1. Go to Employee List (201) from sidebar.
2. Choose an employee to edit hired date.
3. Input a date (e.g. June 1).
4. Save the change.
5. Reopen the employee's profile and check the saved hiring date.

Expected Result

Hiring date should save and display as the exact date entered (June 1).

Actual Result

Hiring date saves and displays as one day later than entered (June 2).

Root Cause

Timezone conversion issue — the date value was being converted between local time (UTC+8) and UTC at some point in the save/retrieve flow without being properly normalized, causing the date to roll forward by one day.

Fix

Corrected the date handling so the hiring date is stored and displayed without unintended timezone shifting.
